Seminar on
Perceptions of Data Quality in Electronic Health Record Reuse

Devan Ray Donaldson, Ph.D.

Assistant Professor

Department of Information & Library Science

School of Informatics, Computing, & Engineering

Indiana University, Bloomington

Friday November 1 @ 11:00 AM - 12:00 PM

JABSOM MEB Library: Computer Lab 107D

Everyone can agree that data quality is important, particularly when considering electronic health records. But what exactly is data quality and what dimensions of data quality are important? This presentation explores definitions of data quality for EHR data, explores why data quality is an important issue for EHR data, and discusses perceptions of data quality from the researcher's perspective. This presentation also discusses the research design for a new project aimed at understanding and developing metrics for evaluating researchers' perceptions of data quality for EHR data based on different use purposes.
